SHORT ANALYSIS DOCUMENTATION

for evaluation of the “PXD Mobichip” produced by PXD System, Macedonia, in relation to the protective influence against electromagnetic emissions that come from mobile telephones.

IGEF Laboratory for research and Assertion, has analyzed the protective influence on “**PXD Mobichip**”, produced by PXD System, Macedonia, against electromagnetic emissions that come from mobile phones. This short documentation presents the essential results obtained by this research. The analysis that was carried out on 02.06.2007, confirms that

“PXD Mobichip”

Produced by PXD System
Leninova 79/1
1000Skopje
Macedonia

Web site: <http://www.pxds.com>
eMail: marketing@pxds.com

is convenient for organism protection from harmful electromagnetic emissions and electromagnetic smog. It is also appropriate for usage with other appliances such as (baby phones, WLAN radio/television networks). Thereby, the requirements of the IGEF International Society for Electromagnetic Smog Research are fulfilled, and the seal for approved and recommended by IGEF is acquired.

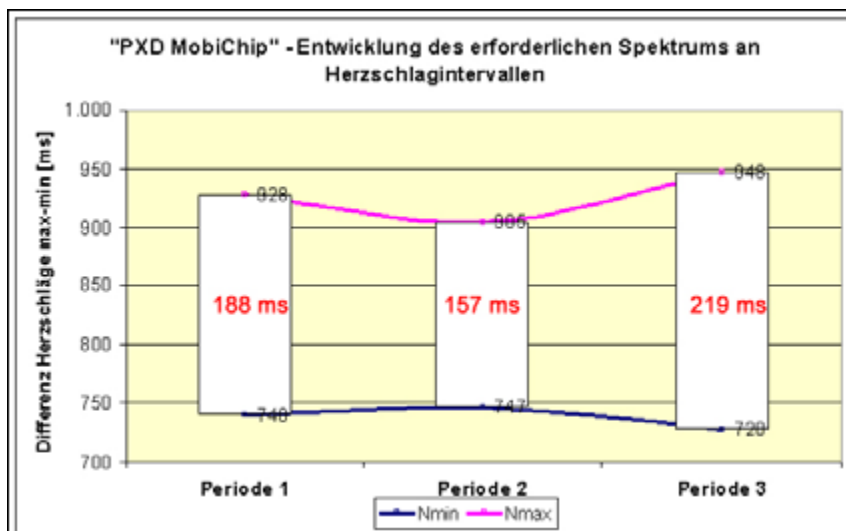

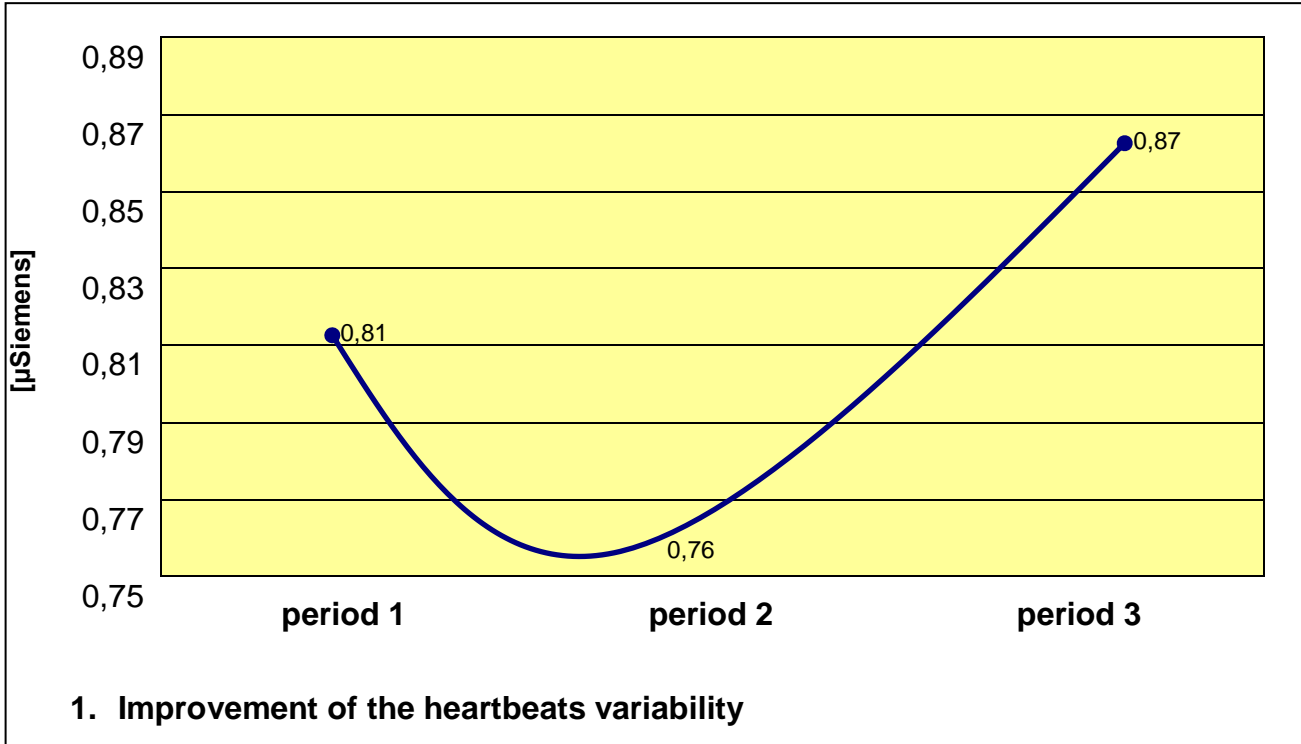

The evidence for the “**PXD Mobichip**” protective influence is obtained by the process of biofeedback effect. 13 people have been tested. Besides, the stress potential reduction, the “PXD Mobichip” influence on the organism rhythmic processes development, as well as the human body adaptability on the outside influences, was also researched.

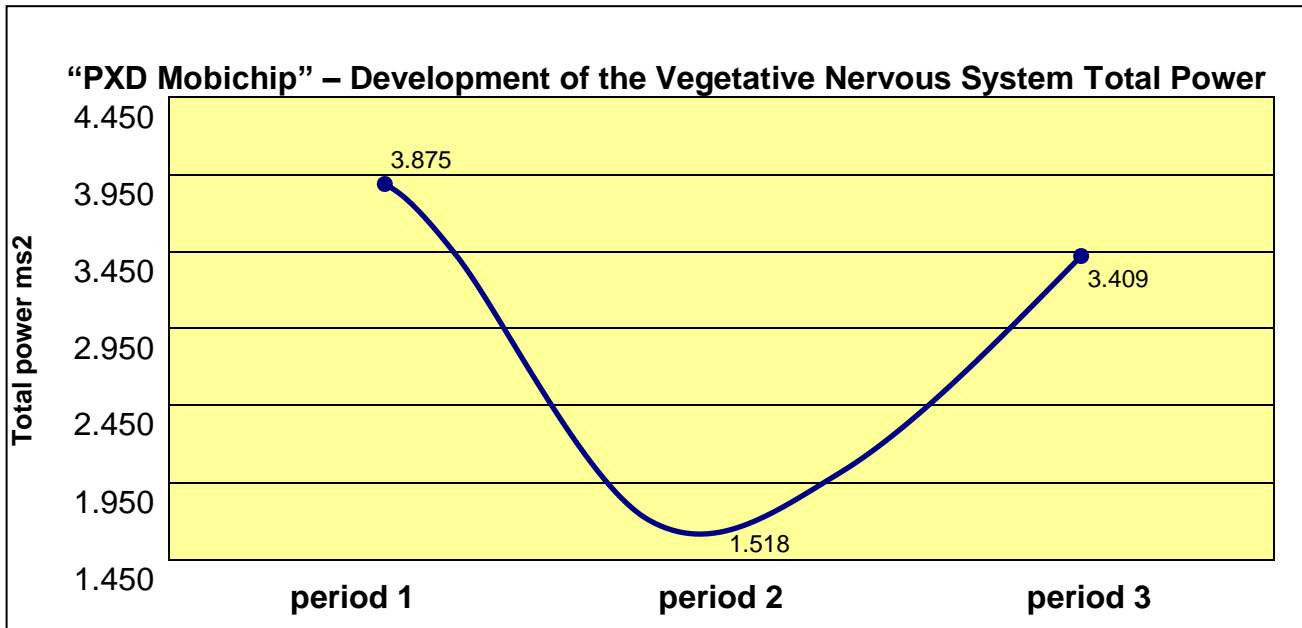

Essential results of the study carried out by the process of biofeedback effect

1. Stress potential reduction

The stress potential average value was reduced for 13%. However, at some individual examinees, the stress potential value reduction reached even 34%. The curve for skin transfer by using “PXD Mobichip” was significantly harmonized.

The Research results have shown that the "PXD Mobichip" informative field harmonizes the harmful influences of the electromagnetic fields at the time of their biological influence on the organism, and it also contributes to sustenance of the human body organism internal balance. The Vegetative Nervous System Total Power is also reduced for more than 50% by using "PXD Mobichip". It reduces the number of registered consequential pairs of heartbeats intervals, for >50 ms, too, thanks to the "PXD Mobichip" informative field.
